

# ANNOUNCING *the* FIRST BOOK *in the* MARGINS SERIES

RHEOLOGY AND DEFORMATION  
OF THE LITHOSPHERE  
AT CONTINENTAL MARGINS

Edited by  
Garry D. Karner, Brian Taylor, Neal W. Driscoll,  
and David L. Kohlstedt

## Rheology and Deformation of the Lithosphere at Continental Margins

Edited by Garry D. Karner, Brian Taylor, Neal W. Driscoll, and David L. Kohlstedt

**JUST  
PUBLISHED!**

### CONTENTS

Consequences of Asthenospheric Variability in Continental Rifting, *W. Roger Buck* • Velocity Fields, Faulting and Strength on the Continents, *James Jackson* • Low-Angle Normal Fault Mechanics and Crustal Strength, *Gary J. Axen* • Depth-Dependent Lithospheric Stretching at Rifted Continental Margins, *Mark Davis* and *Nick Kusznir* • Limits of the Seismogenic Zone, *Larry J. Ruff* • Controls on Subduction Thrust Earthquakes: Downwip Changes in Composition and State, *R. D. Hyndman* • Thermo-Mechanical Models of Convergent Orogenesis: Thermal and Rheologic Dependence of Crustal Deformation, *Sean D. Willett* and *Daniel C. Pope* • Structure of Large-Displacement, Strike-Slip Fault Zones in the Brittle Continental Crust, *F. M. Chester, J. S. Chester, D. L. Kirschner, S. E. Schulz, and J. P. Evans* • Fiction, Friction, and the San Andreas Fault, *Christopher H. Scholz* and *Thomas C. Hanks* • Deformation Behavior of Partially Molten Mantle Rocks, *YaQin Xu, M. E. Zimmerman, and D. L. Kohlstedt* • Relations Among Porosity, Permeability, and Deformation in Rocks at High Temperatures, *Brian Evans, Yves Bernable, and Greg Hirth*

**Garry D. Karner** is senior research scientist in marine geology and geophysics at Columbia University's Lamont Doherty Earth Observatory. **Brian Taylor** is a professor in the Department of Geology and Geophysics at the University of Hawaii at Manoa.

**Neal W. Driscoll** is a professor in the Geosciences Research Division at the Scripps Institution of Oceanography.

**David L. Kohlstedt** is a professor of geology and geophysics at the University of Minnesota.

Traditionally, investigations of the rheology and deformation of the lithosphere (the rigid or mechanically strong outer layer of the Earth, which contains the crust and the uppermost part of the mantle) have taken place at one scale in the laboratory and at an entirely different scale in the field. Laboratory experiments are generally restricted to centimeter-sized samples and day- or year-length times, while geological processes occur over tens to hundreds of kilometers and millions of years. The application of laboratory results to geological systems necessitates extensive extrapolation in both temporal and spatial scales, as well as a detailed understanding of the dominant physical mechanisms. The development of an understanding of large-scale processes requires an integrated approach.

This book explores the current cutting-edge interdisciplinary research in lithospheric rheology and provides a broad summary of the rheology and deformation of the continental lithosphere in both extensional and compressional settings. Individual chapters explore contemporary research resulting from laboratory, observational, and theoretical experiments.
